Press Release

Date: 26.03.2011

Jalavahini Management Services Pvt. Ltd., this is an organization provides efficient, sustainable and cost effective organic solution to solve waste management issues. This organization has got specialization sewage and municipal solid waste treatment using specifically cultured micro organisms under the brand name OS1dms. OS1dms is a fermented mixed culture in acidic medium of beneficial micro organisms. These micro organisms exist naturally. This solution does not contain any genetically modified mark micro organisms.

The advantages of the organic solutions are as follows:

- Not dependent on electricity
- Very little labour required
- No technical labour required for operation
- Minimal maintenance
- Almost zero organic sludge handling
- No foul odour.
- Treatment plant can be built totally underground
- Gravity based system

The said organization the using organic solution as started solid waste treatment and sewage system by using aerobic, anaerobic and facultative method in Mysore Municipal Corporation. The representative of the said organization had given a power point presentation to BBMP Commissioner on this issue a week back. In order to see practical exhibition practical operation of this plant a theme lead by BBMP Commissioner, Health Committee Chairman comprising Senior Councilors and BBMP Environmental Engineers visited this plant belonging to Mysore Municipal Corporation today.

Regarding implementation of this project, decision will be taken after discussing this matter in the forthcoming council section said BBMP Commissioner.
